INSERT, UPDATE, and DELETE Operations Using JDBC
Prepared Statements. The DML operations of INSERT and
UPDATE—that is, the write operations—are done by means
the preparedStatement() method of the Connection object
created above. A call to this method takes variable bind
parameters as input parameters and creates an object
instance of the PreparedStatement class.

Method overriding, in object-oriented programming, is a language feature that allows a subclass or child class to provide a specific implementation of a method that is already provided by one of its superclasses or parent classes. The implementation in the subclass overrides (replaces) the implementation in the superclass by providing a method that has the same name, same parameters or signature ...

Java uses a package system that dictates the file name and path for all program definitions. Its compiler imports the executable class files. C++ uses a header file source code inclusion system to share declarations between source files. Compiled Java code files are generally smaller than code files in C++ as Java bytecode is usually more compact than native machine code and Java programs are ...
