However, the strategic implications of implementing knowledge management systems that significantly aim to change the way things are done in the organization requires proper consideration and careful planning. Moreover, with the evolution of systems to better support different facets of KM, they should be regarded as a critical component in the implementation of the discipline.

Traditional knowledge needs a role in global climate discourse. One significant manifestation of the marginalization of indigenous peoples from the climate change policy and decision-making is the paucity of references in the global climate change discourse to the existing traditional knowledge on climate change.

For over 350 million indigenous peoples worldwide, climate change impacts are expected to be early and severe due to their location in high risk environments. This includes nomadic pastoralists living along desert margins, horticulturalists and fishers in small and low-lying islands, farmers and pastoralists in high-altitudinal zones and hunters and herders across the circumpolar Arctic. To ...
